**TECHNICAL SPECIFICATIONS****BEOVISION MX3000**

Picture tube size	55 cm - 21"
Visual picture size	51 cm - 20"
Picture tube	Full square, black matrix
	In Line 110 degrees
Cabinet	Red, white, black, blue and grey
Operation	Beolink 1000
	Audio Aux Link, two-way datalink
Screen display	Programme No., Frequency,
	Picture and Sound adjustments
Sound system	Stereo decoder A2 built-in
	Bilingual sound A2 built-in
	Stereo enhancement, mono pseudo stereo
Nicam stereo	Prepared for Nicam stereo module
Teletext	5 languages: S-D-GB-I-F
Teletext memory	4 complete pages, + 4 page numbers for
	each TV programme, total 128 numbers
Number of TV programmes	32
Digital tuning system	VHF + S + Hyper + UHF channels
Tuner range	45 - 855 MHz
Satellite programmes	Prepared for Beosat RX, AV Link 21-pin
	Beolink 1000 operation
Speaker system, stereo	2 Log Line
Speaker units	2 x 7.5 cm - 3"
Sound power output RMS	2 x 15 watts/8 ohms
Sound power output music	2 x 18 watts/8 ohms
Harmonic distortion	<0.5%
Intermodulation	<1%
Frequency range $\pm 1.5$ dB	20-20,000 Hz
Power bandwidth	20-12,500 Hz
Signal-to-noise ratio	>50 dB
Bass control	+16 -6 dB/60 Hz
Treble control	$\pm 10$ dB/10,000 Hz
Power supply	180-260 volts/50-60 Hz
Power consumption	70 (50-120) watts
Stand by	<5 watts
Dimensions W x H x D	51 x 55 x 41.5 cm
Weight	23 kg
<b>Connections</b>	
AV Link	21-pin
Audio Aux Link	7-pin
Stereo headphones	Jack, separate volume control
External speakers	8 ohms

## Accessories

Stand	ST 3000: Type 3085
Beosat RX receiver, AV Link	Type 3026
Nicam stereo kit, EU	Type 3037
Nicam stereo kit, GB	Type 3040
Loop amplifier	Type 3098

## Type Survey

Subject to change without notice

**DIAGRAMFORKLARING**

På diagrammerne er der angivet typenumre på transistorer og IC'er. Hvis positionsnummeret er efterfulgt af en stjerne, skal reservedelsnummeret altid benyttes, da denne komponent er specielt udvalgt, f.eks. TR102\*.

**Komponenttryk og koordinatsystem**

PCB-tegningerne over de største printplader indeholder et komponenttryk og et koordinatsystem. På diagrammerne er enhver komponent forsynet med et koordinatnummer. Dette fortæller i hvilket koordinat på PCB-tegningen, komponenten er placeret. Koordinatnumrene er angivet med mindre skrifttype end positionsnumrene.

**Styrekredsløb**

I visse styrekredsløb er den aktive tilstand angivet med en funktionsangivelse. Denne kan eksempelvis være ST.BY. = »low« i stand-by-stilling eller ST.BY. = »high« i stand-by-stilling.

**Ledningsforbindelser**

Ledningsforbindelserne på diagrammerne er samlet i »bundter«. De enkelte ledninger er forsynet med en af følgende koder:

**INTERN FORBINDELSE PÅ EN DIAGRAMSIDE**

Interne forbindelser på en diagramside angives med et tal. Knækket på ledningen viser, i hvilken retning, den anden ende af ledningen findes.

**FORBINDELSE TIL EN ANDEN DIAGRAMSIDE**

Forbindelsen til en anden diagramside angives med et tal samt et bogstav for det diagram, forbindelsen går til.

**Forsyningsspændinger**

Alle forsyningsspændinger i diagrammerne er angivet med en pil og en spændingsangivelse.

**Eksempel:**

Ved siden af spændingsangivelsen står der f.eks. 7 CON. Dette betyder, at den pågældende forsyningsspænding går til 7 steder på den pågældende diagramside (7 CON. = 7 connections).

**EXPLANATION OF DIAGRAM**

Type numbers of transistors and ICs are indicated on the diagrams.

If the position number is followed by an asterisk the spare part number must always be used because the component in question has been specially selected, e.g. TR102\*.

**Component print and coordinate system**

The PCB drawings of the largest printed circuit boards include a component print and a coordinate system.

On the diagrams every component has a coordinate number. This indicates in which coordinate on the PCB drawing the component is situated. The coordinate numbers are written in smaller print types than the position numbers.

**Control Circuit**

In certain control circuits the active mode is indicated by a function term. This may be e.g. ST.BY. = low in the stand-by mode or ST.BY. = high in the stand-by mode.

**Wiring Connections**

The wiring connections on the diagrams are assembled in 'bundles'. The individual wires are provided with one of the following codes:

**INTERNAL CONNECTION ON ONE DIAGRAM PAGE**

Internal connections on a diagram page are indicated by a number. The bend of the wire indicates in which direction the other end of the wire is found.

**CONNECTION TO ANOTHER DIAGRAM PAGE**

A connection to another diagram page is indicated by a number as well as by a letter of the diagram to which the connection leads.

**Supply Voltages**

All supply voltages in the diagrams are indicated by an arrow and a voltage indication.

**Example:**

"7 CON.". This means that the supply voltage in question goes to 7 different places on the diagram page in question (7 CON. = 7 connections).

SYMBOL FOR SIKKERHEDSKOMPONENTER

Ved udskiftning af komponenter med dette symbol skal der anvendes komponenter med samme reservedelsnummer. Den nye komponent skal monteres på samme måde som den udskiftede.

MÅLEBETINGELSER

Alle DC-spændinger er målt i forhold til stel med et voltmeter med en indgangsmodstand på 10 Mohm.

DC-spændingerne og oscillogrammerne er målt i TV-mode med »BRILLIANCE« niveau 20, »CONTRAST« niveau 24 og »COLOUR« niveau 40.

DC-spændingerne er opgivet i volt (V), f.eks. 0,7 V.

Alle oscillogrammer og AC-spændinger er målt i forhold til stel med et oscilloskop eller et voltmeter med en indgangsmodstand på 1 Mohm.

AC-spændingerne er opgivet i millivolt (mV), f.eks. 660 mV.

SYMBOL OF SAFETY COMPONENTS

When replacing components with this symbol, components with identical part numbers must be used. The new component must be mounted in the same way as the one replaced.

MEASURING CONDITIONS

All DC voltages have been measured in relation to ground with a voltmeter with an input resistance of 10 Mohms.

The DC voltages and oscillogrammes have been measured in the TV mode with "BRILLIANCE" level 20, "CONTRAST" level 24 and "COLOUR" level 40.

The DC voltages are stated in volts (V), e.g. 0.7 V.

All oscillograms and AC voltages have been measured in relation to ground with an oscilloscope or a voltmeter with an input resistance of 1 Mohm.

AC voltages are stated in millivolts (mV), e.g. 660 mV.

## 5-1

# Bang & Olufsen

### JUSTERINGSVEJLEDNING

Justeringerne udføres med følgende grundstilling, med mindre andet er nævnt:

»BRILLIANCE« niveau 20, »COLOUR« niveau 40 og »CONTRAST« niveau 24.

#### Netdel, 1PL15:

Et DC-voltmeter tilsluttes ben 10 på lineudgangs-transformatoren 1LL53.

Potentiometeret 1PL15 justeres til 138V.

#### Skærmgitter, 2R39 UG2:

»CONTRAST« og »BRILLIANCE« reguleres til minimum.

Med et DC-voltmeter måles spændingerne på kollektorerne af videoudgangstransistorerne 2TR11, 2TR21 og 2TR31.

Med 2R39 UG2 potentiometeret justeres den højeste af de målte værdier til 155V.

#### Fokus, 2R39:

Fokuspotiometeret 2R39 justeres, til der opnås maksimal skarphed på de lodrette linjer, der ligger ca. 10 cm. fra skærnkanten.

#### Spidshvid, 40PV38:

»BRILLIANCE« reguleres til niveau 09 og

»CONTRAST« til niveau 31.

Modtageren tilføres et gittermønstersignal.

Et oscilloscop tilsluttes ben 6 på billedrørssoklen (10:1 probe).

Potentiometeret 40PV38 justeres til en amplitude på 90V<sub>SS</sub> fra sort til hvidt.

#### Strålestrøm, 40PV44:

»BRILLIANCE« reguleres til niveau 31 og

»CONTRAST« til niveau 10.

Modtageren tilføres et hvidt signal.

Et oscilloscop tilsluttes ben 6 på billedrørssoklen (10:1 probe).

Potentiometeret 40PV44 justeres til en amplitude på 50V<sub>SS</sub> fra sort til hvidt.

#### Hvidniveau, 2R18, 2R28, 2R38:

»BRILLIANCE« reguleres til niveau 24 og

»CONTRAST« til niveau 13.

Modtageren tilføres et gråskalsignal.

Potentiometeret 2R28 sættes i midterstilling, og med potentiometerne 2R18 og 2R38 justeres, til gråskalaens felter er farveløse.

Såfremt der ikke opnås farveløse felter, ændres 2R28's indstilling, og proceduren gentages.

### ADJUSTMENTS

All adjustments are carried out with the following preset levels, unless otherwise indicated:

"BRILLIANCE" level 20, "COLOUR" level 40, "CONTRAST" level 24.

#### Power-supply, 1PL15:

Connect a DC voltmeter to pin 10 of the EHT-transformer 1LL53.

Adjust the potentiometer 1PL15 to 138V.

#### Screen grid, 2R39 UG2:

Adjust "CONTRAST" and "BRILLIANCE" to minimum.

Using a DC voltmeter measure the voltages of the collectors of the video output transistors 2TR11, 2TR21 and 2TR31.

Using the potentiometer 2R39 UG2 set the highest of the measured levels to 155V.

#### Focus, 2R39:

Adjust the focus potentiometer 2R39 until maximum sharpness is achieved on the vertical lines approx. 10 cm from the edge of the screen.

#### Peak white, 40PV38:

Adjust "BRILLIANCE" to level 09 and "CONTRAST" to level 31.

Feed a grid pattern signal to the receiver.

Connect an oscilloscope to pin 6 of the picture tube socket (10:1 probe).

Adjust the potentiometer 40PV38 to an amplitude of 90V<sub>pp</sub> from black to white.

#### Beam current, 40PV44:

Adjust "BRILLIANCE" to level 31 and "CONTRAST" to level 10.

Feed a white signal to the receiver.

Connect an oscilloscope to pin 6 of the picture tube socket (10:1 probe).

Adjust the potentiometer 40PV44 to an amplitude of 50V<sub>pp</sub> from black to white.

#### White alignment, 2R18, 2R28, 2R38:

Adjust "BRILLIANCE" to level 24 and "CONTRAST" to level 13.

Feed a grey scale signal to the receiver.

Set the potentiometer 2R28 to its middle position, and using the potentiometers 2R18 and 2R38 adjust until the fields of the grey scale are colourless.

If colourless fields cannot be achieved, adjust the position of 2R28 and repeat the procedure.

## **Tunerjustering.**

### **AGC take over, 1PI36:**

Modtageren tilføres et antennesignal på 1,3mV og frekvensen 217MHz.

Et DC-voltmeter tilsluttes ben 5 på 1II36.

Potentiometeret 1PI36 drejes helt med uret.

Potentiometeret 1PI36 justeres, til spændingen er faldet 0,3V.

## **Afbøjningsjusteringer.**

### **Horisontal centrering, 1PL01:**

Potentiometeret 1PL01 justeres til optimal billed-centrering.

### **Horisontal amplitude, 1PG12:**

Potentiometeret 1PG12 justeres til optimal billed-bredde.

### **Vertikal centrering, 1PF02:**

Potentiometeret 1PF02 justeres til optimal billed-centrering.

### **Vertikal amplitude, 1PF14:**

Potentiometeret 1PF14 justeres til optimal billed-højde.

### **E/W amplitude, 1PG08:**

Potentiometeret 1PG08 justeres til lige lodrette linjer i højre og venstre side af billedet.

### **E/W trapez, 1PG02:**

Potentiometeret 1PG02 justeres til lige lodrette linjer i højre og venstre side af billedet.

## **PAL justeringer.**

Under disse justeringer er det en fordel at fjerne lydmodulet PCB20.

### **PAL-reference 8,86MHz, 40CC12:**

Modtageren tilføres et PAL farvebar-signal.

På loddessiden af PCB40 forbindes ben 13 og ben 28 på 40IC01 med en 1 kohms modstand.

Ben 17 og ben 9 på 40IC01 kortsluttes.

Trimmekondensatoren 40CC12 justeres til minimal farverul.

Kortslutningen og modstanden fjernes.

### **PAL-fase, 40LC17, PAL-amplitude, 40PC18:**

»COLOUR« justeres til niveau 60.

Modtageren tilføres et test-signal med farveløse R-Y/B-Y-felter.

Spolen 40LC17 (PAL-fase) og potentiometeret 40PC18 (PAL-amplitude) justeres til minimal farve i de farveløse R-Y/B-Y-felter af testbilledet.

## **Tuner adjustment.**

### **AGC take-over, 1PI36:**

Feed an aerial signal of 1.3mV and the frequency 217MHz to the receiver.

Connect a DC voltmeter to pin 5 of 1II36.

Turn the potentiometer 1PI36 clockwise as much as possible.

Adjust the potentiometer until the voltage has dropped by 0.3V.

## **Deflection adjustments.**

### **Horizontal centering, 1PL01:**

Using the potentiometer 1PL01, adjust until the picture is correctly centered.

### **Horizontal amplitude, 1PG12:**

Using the potentiometer 1PG12, adjust until the correct picture width is achieved.

### **Vertical centering, 1PF02:**

Using the potentiometer 1PF02, adjust until the picture is correctly centered.

### **Vertical amplitude, 1PF14:**

Using the potentiometer 1PF14, adjust until the correct picture height is achieved.

### **E/W amplitude, 1PG08:**

Using the potentiometer 1PG08, adjust until straight vertical lines are achieved in the righthand and lefthand sides of the picture.

### **E/W trapeze, 1PG02:**

Using the potentiometer 1PG02, adjust until straight vertical lines are achieved in the righthand and lefthand sides of the picture.

## **PAL adjustments**

It is advisable to remove the sound module PCB20 before carrying out these adjustments.

### **PAL reference 8.86MHz, 40CC12:**

Feed a PAL colourbar signal to the receiver.

On the copperfoil side of PCB40 connect pins 13 and 28 of 40IC01 with a resistor of 1 kohm.

Short-circuit pins 17 and 9 of 40IC01.

Adjust the trimming capacitor to minimum colour scroll.

Remove the short-circuit and the resistor.

### **PAL phase, 40LC17, PAL amplitude, 40PC18:**

Adjust "COLOUR" to level 60.

Feed a test signal with colourless R-Y/B-Y fields to the receiver.

Adjust the coil 40LC17 (PAL phase) and the potentiometer 40PC18 (PAL amplitude) to minimum colour in the colourless R-Y/B-Y fields of the test picture.

## 5-3

### SECAM justeringer

Under disse justeringer er det en fordel at fjerne lydmodulet PCB20.

Modtageren tilføres et SECAM farvebar-signal.

#### Identifikation, 40LC14:

Et DC-voltmeter tilsluttes ben 21 på 40IC01.  
Spolen 40LC14 justeres til maksimal spænding.

#### B-Y demodulator, 40LC05:

Et oscilloscop tilsluttes ben 3 på 40IC01.  
Spolen 40LC05 justeres, til de farveløse bjælker i farvebaren har samme niveau som linjeblankingen.

#### R-Y demodulator, 40LC01:

Et oscilloscop tilsluttes ben 1 på 40IC01.  
Spolen 40LC01 justeres, til de farveløse bjælker i farvebaren har samme niveau som linjeblankingen.

#### Cloche filter, 40LC23:

Et oscilloscop tilsluttes ben 15 på 40IC01.  
Spolen 40LC23 justeres, til farvebjælkernes amplitude har samme niveau.

### Lydjusteringer

#### 5,5MHz, 20LS80, 5,74MHz, 20LS03:

Modtageren tilføres et stereo-signal indeholdende både 5,5MHz og 5,74MHz med modulation.  
Et AC-voltmeter tilsluttes ben 8 på 20IC01.  
Spolen 20LS03 justeres til maksimal amplitude.  
AC-voltmeteret tilsluttes ben 8 på 20IS88.  
Spolen 20LS80 justeres til maksimal amplitude.

#### 54kHz, 20LS17:

Modtageren tilføres et stereo-signal indeholdende både 5,5MHz og 5,74MHz med modulation.  
Et oscilloscop tilsluttes ben 26 på 20IS21.  
Spolen 20LS17 justeres til maksimal amplitude.

#### Kanalseparation, 20PS92:

Modtageren tilsluttes et stereo-signal uden modulation i venstre kanal.  
Et oscilloscop tilsluttes ben 5 på 20BS15.  
Potentiometeret 20PS92 justeres til minimal amplitude.

#### 6,0MHz, 20LS86:

Modtageren tilføres et 6,0MHz lydsignal med modulation.  
Et AC-voltmeter tilsluttes ben 8 på 20IS88.  
Spolen 20LS86 justeres til maksimal amplitude.

## Bang & Olufsen

### SECAM adjustments:

It is advisable to remove the sound module PCB20 before carrying out these adjustments.

Feed a SECAM colourbar signal to the receiver.

#### Identification, 40LC14:

Connect a DC voltmeter to pin 21 of 40IC01.  
Adjust coil 40LC14 to maximum voltage.

#### B-Y demodulator, 40LC05:

Connect an oscilloscope to pin 3 of 40IC01.  
Adjust coil 40LC05 until the colourless bars of the colourbar are on the same level as the line blanking.

#### R-Y demodulator, 40LC01:

Connect an oscilloscope to pin 1 of 40IC01.  
Adjust coil 40LC01 until the colourless bars of the colourbar are on the same level as the line blanking.

#### Cloche filter, 40LC23:

Connect an oscilloscope to pin 15 of 40IC01.  
Adjust coil 40LC23 until the amplitudes of the colour bars are on the same level.

### Sound adjustments.

#### 5.5MHz, 20LS80, 5.74MHz, 20LS03:

Feed a modulated stereo signal containing both 5.5MHz and 5.74MHz to the receiver.  
Connect an AC voltmeter to pin 8 of 20IC01.  
Adjust coil 20LS03 to maximum amplitude.  
Connect the AC voltmeter to pin 8 of 20IS88.  
Adjust coil 20LS80 to maximum amplitude.

#### 54kHz, 20LS17:

Feed a modulated stereo signal containing both 5.5MHz and 5.74MHz to the receiver.  
Connect an oscilloscope to pin 26 of 20IS21.  
Adjust coil 20LS17 to maximum amplitude.

#### Channel separation, 20PS92:

Feed a stereo signal without modulation in the left channel to the receiver.  
Connect an oscilloscope to pin 5 of 20BS15.  
Adjust the potentiometer 20PS92 to minimum amplitude.

#### 6.0MHz, 20LS86:

Feed a 6.0MHz modulated sound signal to the receiver.  
Connect an AC voltmeter to pin 8 of 20IS88.  
Adjust coil 20LS86 to maximum amplitude.

## ADSKILLELSE

Demontering af kontrastskærmen

## DISASSEMBLY

Removal of contrast screen

Træk ud i kontrastskærmens nederste kant.

Pull the lower edge of the contrast screen outwards.

## Montering af kontrastskærmen

## Mounting of contrast screen

Monter skærmen i rillen af det ene sidepanel.

Bøj skærmen frem og monter skærmen i rillen af det modsatte sidepanel.

Fit the screen into the groove in one of the side panels.

Flex the screen slightly outwards and fit the screen into the groove in the opposite side panel.

## Bagpart

## Rear part

De fire skruer løsnes, og bagparten trækkes lige bagud.

Loosen the 4 screws and then remove the rear part by pulling straight outwards.

## Serviceposition

## Service position

Chassiset sættes i servicepositionen, ved at det trækkes udad og løftes op.

Place the chassis in the service position by pulling it outwards and lifting it.

Ledningsbakken kan løsnes fra kabinettet, ved at dets bageste ende drejes mod uret og dernæst trækkes fremad.

The cable tray can be detached from the cabinet by turning its rear end anticlockwise and then pulling it forwards.

Toppanel

Top panel

Panelet løsnes i den ene side, ved at låsen aktiveres med en skruetrækker.

Loosen the panel in one side by releasing the lock with a screwdriver.

Toppanelet kan nu fjernes.

The top panel can now be removed.

PCB 05 IR-modtager

PCB 05 IR-receiver

Låsen løsnes med en skruetrækker, og PCB'en tages ud, ved at den løftes i den forreste kant.

Release the lock with a screwdriver and remove the PCB by lifting it at its front.

NB! Ved demontering af IR-modtagerens hus skal IR-modtagerdioden loddes ud.

Note! If the housing of the IR-receiver is to be removed, the IR-receiver diode must be desoldered.

## Højtalerpanel

## Loudspeaker panel

En skruetrækker sættes forsigtigt ind mellem højtalerpanelet og kabinettet i apparatets højre side.

Højtalerpanelet løsnes med et let tryk med skruetrækkeren og skubbes dernæst mod venstre.

Med et let tryk mod højtalerpanelets venstre hjørne frigøres panelet fuldstændig.

Carefully insert a screwdriver between the loudspeaker panel and the cabinet in the right-hand side of the set.

Loosen the loudspeaker panel by exerting a light pressure with the screwdriver. Push the loudspeaker panel towards the left.

A light push against the left corner of the loudspeaker panel will now release the panel completely.

## Højtalerbaffle

## Loudspeaker baffle

De seks skruer fjernes.

Højtalerbafflen løsnes, ved at de to låse i bunden af apparatet aktiveres, hvorefter bafflen trækkes fremad og opad.

Remove the 6 screws.

Loosen the loudspeaker baffle by using a screwdriver to release the 2 locks at the base of the set. Then pull the baffle outwards and upwards.

## REPARATIONS-TIPS

## REPAIR TIPS

### Chassis Modifications

Tabel 1

Picture tube Type	Videocolor	ITT
3140	8053219*1*2	8053219*1
3141	8053219*2	8053219
3143	8053272	8053272*2
3144	8053272	8053272*2
3145	8053272*1	8053272*1*2
3146	8053272	8053272*2
3147	8053272	8053272*2

\*1 Change IR01 8341123 → 8341124

\*2 Change chassis as shown in Tabel 2

Tabel 2

Pos. No. Picture tube	Videocolor	ITT
RG 05	270 kΩ	100 kΩ
RG11	10 kΩ	4.7 kΩ
RG 12	3.9 kΩ	1.2 kΩ
RF17	3.3 Ω - 5011622	3 Ω - 5011614
RL 54	10 kΩ	100 kΩ
CL 48	12 nF - 4130429	11 nF - 4130435
CL 53	10 kΩ	100 kΩ

### Stand-by

Apparatet er i stand-by og kan ikke startes op.

Stand-by indikatoren lyser.

Kontroller, om der er kommunikation på I<sup>2</sup>C bussen.  
Dette måles på ben 31 og 32 af 01IR01.

Apparatet tændes og forsøger at starte op tre gange,  
hvorefter det går i stand-by.

Det skyldes, at sikkerhedskredsløbet på ben 28 af  
01IL14 aktiveres.

Kontroller kredsløbet omkring følertransistoren  
01TL17.

### Stand-by

The TV set is in stand-by and cannot start up.

The stand-by indicator lights.

Check whether there is communication on the I<sup>2</sup>C  
bus.

This is measured on pins 31 and 32 of 01IR01.

The TV set is switched on, tries to start up three  
times and then returns to stand-by. This is due to  
the activation of the protection circuit on pin 28 of  
01IL14.

Check the sensor circuit including the transistor  
01TL17.

**Servicering af PAL/SECAM dekoderen PCB40**

Når PAL/SECAM dekoderen PCB40 serviceres, kan lydmodulet PCB20 fjernes.

**Servicing PAL/SECAM decoder PCB40**

When servicing the PAL/SECAM decoder PCB40, the sound module PCB20 can be removed.

Desuden kan tekstmodulet PCB07 eller OSD-modulet PCB14 fjernes.

Apparatet viser nu billede, men der er ingen lyd, teletext eller display på skærmen.

Pil i øverste højre hjørne lyser.

The text module PCB07 or the OSD-module can also be removed. A picture can now be displayed on the screen, but there is no sound, teletext or display on the screen.

An arrow in the upper righthand corner lights.

**Båndkabel mellem PCB40 og PCB02**

Det sekspoledede båndkabel mellem PCB40 og PCB02 må ikke monteres før 30 sekunder efter, apparatet er slukket.

Det skyldes, at RGB-udgangen har stelforbindelse gennem det sekspoledede båndkabel.

**Ribbon cable between PCB40 and PCB02**

The 6-pin ribbon cable between PCB40 and PCB02 must not be mounted until 30 seconds after the set has been switched off. This precaution is necessary because the RGB output is connected to ground via the 6-pin cable.

**Fokusledning**

Indstråling fra fokusledningen kan hindre datakommunikationen på PCB12. Derfor må fokusledningen ikke komme i nærheden af PCB12, og ved samling af apparatet bør fokusledningen monteres som vist på tegningen.

**Focus wire**

Interference from the focus wire can impede the data communication on PCB12. Consequently, the focus wire must be kept away from PCB12, and when assembling the set the focus wire should be mounted as shown on the drawing.

## SLUTAFPRØVNING

Denne afprøvning kan benyttes som kontrol, efter at reparationen er afsluttet.

### Tilslutninger

TV'et tilsluttes lysnettet og et antennesignal.

### Nærbetjening

Hovedafbryderen aktiveres → Stand-by indikator lyser

 aktiveres → Starter på P1, hvis TV'et har været frakoblet netspændingen, og ellers på sidst benyttede program

### Beolink 1000 fjernbetjening

#### Tænd

 → Starter på sidst benyttede program  
0-31 → Starter på valgte programnummer

#### Tune

Direkte frekvensvalg  
Indstilling af ønsket frekvens, f.eks. 543MHz (kanal 30), på et programnummer ml. 0 og 31.  
Omregningstabel for frekvens/kanal findes i betjeningsvejledningen (Frekvensoversigt).

 → Grønt display  
 → Gult display

#### Store

Den indstillede frekvens kan lægges i hukommelsen på et programnummer mellem 1 og 31.

 → Rødt display  
 → Programnummer 1 vælges  
 → Grønt display  
 → Stand-by  
 → Den på programnummer 1 lagrede frekvens vises

#### Tune

##### Søgning

Søgning under det valgte programnummer (0-31)

 eller  → Søgning stopper på nærmeste senderfrekvens

#### Finindstilling

Ønskede frekvens er fundet.  
Billedet står ikke skarpt.

 → Grønt display  
 eller  → FT (fine tune) kan varieres op (+) eller ned (-)

## FINAL TEST

This test may be used as a check-up after the repair has been carried out.

### Connections

Connect the TV set to the mains supply and an aerial signal.

### Direct Operation

Activate the mains switch → The stand-by indicator lights

Activate  → Starts on P1 if the TV set has been disconnected from the mains supply or else on the programme last seen

### Beolink 1000 Remote Control

#### Switching On

 → Starts on the programme last seen  
0-31 → Starts on the preset No selected

#### Tuning

Direct frequency selection  
Setting of a desired frequency, e.g. 543MHz (channel 30), on a preset No between 0 and 31.  
Conversion table for frequency/channel, see owner's manual (List of frequencies).

 → Green display  
 → Yellow display

#### Store

The set frequency can be stored on a preset No between 0 and 31.

 → Red display  
 → Selection of preset No 1  
 → Green display  
 → Stand-by  
 → The frequency stored on the selected preset No is shown

#### Tuning

##### Search

Search on the selected preset No (0-31)

 or  → The search stops at the closest transmitter frequency

#### Fine Tuning

The frequency desired has been found.  
The picture is not sharp.

 → Green display  
 or  → FT (fine tuning) may be varied up (+) or down (-)

**Teletext**

Kun ved apparater med indbygget teletext.

- TEXT** → Skifter til tekst-mode  
 Vælg en side, f.eks. 100  
**GOTO** 1 0 0 → Tekstside 100 vises  
**STORE** 2 **STORE** → Tekstside 100 lagres på hukommelsesside 2  
 ● → Stand-by  
**TEXT** 2 → Hukommelsesside 2, tekstside 100 vises

**Billede**

- PICTURE** → »BRILLIANCE xx«, grønt display  
 eller  → Lys varieres mellem 0 og 31  
**PICTURE** → »COLOUR xx«, grønt display  
 eller  → Farvemætningen varieres mellem 0 og 60  
**PICTURE** → »CONTRAST xx«, grønt display  
 eller  → Kontrast varieres mellem 0 og 31

**Lyd**

- SOUND** → »VOLUME xx«, grønt display  
 eller  → volume varieres mellem 0 og 40  
**SOUND** → »BALANCE x«, grønt display  
 eller  → Balance varieres mellem 8 og -8  
**SOUND** → »TREBLE x«, grønt display  
 eller  → Diskantniveauet varieres mellem 5 og -4  
**SOUND** → »BASS x«, grønt display  
 eller  → Basniveauet varieres mellem 5 og -4  
**SOUND** → »VOLUME HP xx«, grønt display  
 eller  → Volume i hovedtelefon varieres mellem 0 og 32

**To sprog**

Ved modtagelse af to-sprogede udsendelser kan der vælges mellem sprog A og B.

- TURN** → Skifter mellem sprog A og sprog B. Indikeres af to røde pile i øverste højre hjørne (◀ = A, ▶ = B).

**Teletext**

Only applies to TV sets with built-in teletext.

- TEXT** → Switches into the text mode  
 Select a page, e.g. 100  
**GOTO** 1 0 0 → Shows text page 100  
**STORE** 2 **STORE** → Text page 100 is stored on memory page 2  
 ● → Stand-by  
**TEXT** 2 → Shows memory page 2, text page 100

**Picture**

- PICTURE** → "BRILLIANCE xx", green display  
 or  → Brilliance varies in the range from 0 to 31  
**PICTURE** → "COLOUR xx", green display  
 or  → Colour saturation varies in the range from 0 to 60  
**PICTURE** → "CONTRAST xx", green display  
 or  → Contrast varies in the range from 0 to 31

**Sound**

- SOUND** → "VOLUME xx", green display  
 or  → Volume level varies in the range from 0 to 40  
**SOUND** → "BALANCE x", green display  
 or  → Balance level varies in the range from 8 to -8  
**SOUND** → "TREBLE x", green display  
 or  → Treble level varies in the range from 5 to -4  
**SOUND** → "BASS x", green display  
 or  → Bass level varies in the range from 5 to -4  
**SOUND** → "VOLUME HP xx", green display  
 or  → Volume level in head phones varies in the range from 0 to 32

**Dual Languages**

When receiving dual language programmes, language A or B may be selected.

- TURN** → Switches between language A and language B. This is indicated by two red arrows in the upper righthand corner (◀ = A, ▶ = B)

## Stereo lyd

Ved modtagelse af stereo-lyd skifter TV'et automatisk til stereo. Stereo indikeres af to røde pile i øverste højre hjørne.

- TURN** → Mono-lyd, røde pile slukket  
**TURN** → Stereo-lyd, to røde pile i øverste højre hjørne

Ved skift til anden stereo-udsendelse vil TV'et automatisk skifte til stereo.

## Shift funktioner

Tidskonstant

- SHIFT** **2** → Tidskonstanten ændres til en perfekt synkronisering mellem TV'et og en video-båndoptager (»toggle«-funktion). Indikeres med »A/V« efter programnummeret på skærmen

System B/System L/System M

- SHIFT** **3** → Systemskift (»toggle«-funktion)

## Billede

Der foretages kontrol af geometri, højspænding, fokus, følsomhed, hvid balance, farvespring, opløsning, slæb, skygger, interferens og gråskala.

## Stereo Sound

When receiving stereo sound, the TV set automatically switches to stereo. Stereo is indicated by two red arrows in the upper righthand corner.

- TURN** → Mono sound, no red arrows in the upper righthand corner  
**TURN** → Stereo sound, two red arrows in the upper righthand corner

When switching to another stereo transmission, the TV-set automatically switches to stereo sound.

## Shift Functions

Time constant

- SHIFT** **2** → The time constant is changed into a perfect synchronization between the TV set and a video recorder (toggle function). This is indicated by "A/V" after the preset No

System B/System L/System M

- SHIFT** **3** → Change of system (toggle function)

## Picture

Check geometry, high voltage, focus, sensitivity, white balance, colour switching, resolution, ringing, ghosts, interference and grey scale.

**ISOLATIONSTEST**

Ethvert apparat skal isolationstestes, efter at det har været adskilt. Testen udføres, når apparatet er samlet igen og er klar til udlevering til kunden.

Der må ikke forekomme overslag under testen!

Isolationstesten udføres på følgende måde:

De to stikben på netstikket kortsluttes og tilsluttes den ene af terminalerne på isolationstesteren. Den anden terminal tilsluttes stelbenet i en af højttalerstikdåserne.

**INSULATION TEST**

Each set must be insulation tested after having been dismantled. Make the test when the set has been reassembled and is ready to be returned to the customer.

Flashovers must not occur during the testing procedure!

Make the insulation test as follows:

Short-circuit the two pins of the mains plug and connect them to one of the terminals of the insulation tester. Connect the other terminal to the chassis pin of one of the loudspeaker sockets.

**OBS!**

For at undgå beskadigelser af apparatet er det vigtigt, at begge terminaler på isolationstesteren har virkelig god kontakt.

Spændingsreguleringen på isolationstesteren drejes langsomt op, indtil en spænding på 1,5-2 kV er opnået. Her skal den holdes i ét sekund, hvorefter der langsomt drejes ned for spændingen igen.

**NOTE!**

To avoid damaging the set it is essential that both terminals of the insulation tester have good contact.

Slowly turn the voltage control of the insulation tester until a voltage of 1.5-2 kV is obtained. Maintain that voltage for one second, then slowly turn it down again.

TECHNICAL SPECIFICATIONS		BEOVISION MX4500
Picture tube size		70 cm – 28"
Visual picture size		66 cm – 26"
Picture tube		Full square, black matrix, In line 110 degrees
Cabinet		Red, white, black, blue and grey
Operation		Beolink 1000, Audio Aux Link
Screen display		Programme No., Frequency, Picture and Sound adjustments
Sound system		Stereo decoder A2 built-in, Bilingual sound A2 built-in
		Stereo enhancement, mono pseudo stereo
Nicam stereo		Prepared for Nicam stereo module
Teletext		5 languages: S-D-GB-I-F
Teletext memory		4 complete pages, + 4 page numbers for each TV programme, total 128 numbers
Number of TV programmes		32
Digital tuning system		VHF + S + Hyper + UHF channels
Tuner range		45 – 855 MHz
Transposer French L system		Built-in
Satellite programmes		Prepared for Beosat RX, AV Link 21-pin
		Beolink 1000 operation
Speaker system, stereo		2 Log Line
Speaker units		2 x 7.5 cm – 3"
Sound power output RMS		2 x 15 watts/8 ohms
Sound power output music		2 x 18 watts/8 ohms
Harmonic distortion		<0.5%
Intermodulation		<1%
Frequency range $\pm 1.5$ dB		20-20,000 Hz
Power bandwidth		20-12,500 Hz
Signal-to-noise ratio		>50 dB
Bass control		+16 -6 dB/60 Hz
Treble control		$\pm 10$ dB/10,000 Hz
Power supply		180-260 volts/50-60 Hz
Power consumption		85 (63-150) watts
Stand by		5 watts
Dimensions W x H x D/Weight		65 x 67.5 x 46.5 cm/40.3 kg
<b>Connections:</b>		
AV Link		21-pin
Audio Aux Link		7-pin
Stereo headphones		Jack, separate volume control
External speakers		8 ohms
<b>Accessories:</b>		
Stand		ST 5000: 3076
Stand MX 4500 + VX 3000		ST 5000: 3076 + VX Shelf: 3077
Beosat RX receiver, AV Link		3026
Nicam stereo kit, EU		3037
Nicam stereo kit, GB		3040
AVX 1 Expander box 3099		3 sockets AV Link 21-pin, 2 sockets Audio Aux Link 7-pin
Loop amplifier		3098

## JUSTERINGSVEJLEDNING

### Netdel, 1PL15:

Et DC-voltmeter tilsluttes ben 10 på linieudgangs-transformatoren 1LL53.

Potentiometeret 1PL15 justeres til 152 V.

*Alle øvrige justeringer, se afsnit 5.*

## ADJUSTMENTS

### Power-supply, 1PL15:

Connect a DC voltmeter to pin 10 of the EHT-trans-former 1LL53.

Adjust the potentiometer 1PL15 to 152 V.

*All other adjustments, see section 5.*

---

## JUSTIERUNGEN

### Netzteil, 1PL15:

An Stift 10 des Zeilenausgangstransformators 1LL53 einen Gleichstromspannungsmesser anschließen.

Das Potentiometer 1PL15 auf 152 V einstellen.

*Alle übrigen Justierungen, siehe Abschnitt 5.*

## REGLAGES

### Bloc d'alimentation, 1PL15:

Raccorder un voltmètre cc à la borne 10 du transfor-mateur de sortie de ligne 1LL53.

Régler le potentiomètre 1PL15 sur 152 V.

*Tous les autres réglages, voir section 5.*

---

## ADSKILLELSE

Demontering af kontrastskærmen

## DISASSEMBLY

Removal of contrast screen

Pyntelisterne over og under kontrastskærmen løsnes ved at trykke listen ind (A) og samtidig trække ud i pilen B's retning. Listerne kan nu frigøres hele vejen rundt.

I hvert af de fire hjørner sidder en skrue som skrues ud, hvorefter kontrastskærmen er fri.

Loosen the upper and lower plastic strips by firmly pressing the strips in one side (A) and simultaneously pulling at the end of the strips in the direction of the arrow B. The strips are now loose and can be removed.

Loosen the screw in each of the four corners. The contrast screen can now be removed.

Bagpart

Rear part

De fire skruer løsnes, og bagparten trækkes lige bagud.

Loosen the four screws and then remove the rear part by pulling straight outwards.

## Serviceposition

## Service position

Chassiset frigøres fra rammen i bunden ved at frigøre låsetappene C ved chassissets forreste kanter. Herefter kan chassisset trækkes bagud.

Chassiset sættes i serviceposition, ved at det trækkes fri og løftes op.

Ledningsbakken kan løsnes fra kabinettet, ved at trække denne i pilen D's retning.

To detach the chassis from the frame in the bottom of the set, release the two locks C at the front edges of the chassis. The chassis can now be pulled outwards.

Place the chassis in the service position by pulling it outwards and lifting it.

Detach the cable tray from the cabinet by pulling it in the direction of the arrow D.

Toppanel

Top panel

Panelet løsnes i den ene side, ved at låsen aktiveres med en skruetrækker.

Loosen the panel in one side by releasing the lock with a screwdriver.

Toppanelet kan nu fjernes.

The top panel can now be removed.

PCB 05 IR-modtager

PCB 05 IR-receiver

Låsen løsnes med en skruetrækker, og PCB'en tages ud, ved at den løftes i den forreste kant.

Release the lock with a screwdriver and remove the PCB by lifting it at its front.

NB! Ved demontering af IR-modtagerens hus skal IR-modtagerdioden loddes ud.

Note! If the housing of the IR-receiver is to be removed, the IR-receiver diode must be desoldered.

Højtalerpanel

Loudspeaker panel

Panelet frigøres i venstre side (set bagfra) ved at løsne låsene med en skruetrækker igennem hullerne i kabinettet (E). Herefter trækkes panelet fri langs kanten.

Loosen the panel in the left-hand side (seen from behind) by inserting a screwdriver into the holes in the cabinet (E) to release the locks. Loosen the panel at the front of the set.

Panelet frigøres i den anden side ved at løsne låsene forfra med en skruetrækker mellem panelet og kabinettet (F).

To detach the panel in the opposite side, release the locks by inserting a screwdriver between the panel and the cabinet (F).

## SLUTAFPRØVNING

Denne afprøvning kan benyttes som kontrol, efter at reparationen er afsluttet.

NB! I apparater fra S/W version 2.0 er de mulige programnumre 1-32 i stedet for 0-31.

## Tilslutninger

TV'et tilsluttes lysnettet og et antennesignal.

## Nærbetjening

Hovedafbryderen aktiveres → Stand-by indikator lyser

**STEP** aktiveres → Starter på P1, hvis TV'et har været frakoblet netspændingen, og ellers på sidst benyttede program

## Beolink 1000 fjernbetjening

### Tænd

**TV** → Starter på sidst benyttede program  
0-31 → Starter på valgte programnummer

### Tune

Direkte frekvensvalg  
Indstilling af ønsket frekvens, f.eks. 543MHz (kanal 30), på et programnummer ml. 0 og 31.  
Omregningstabel for frekvens/kanal findes i betjeningsvejledningen (Frekvensoversigt).

**GO TO** → Grønt display  
**5 4 3** → Gult display

### Store

Den indstillede frekvens kan lægges i hukommelsen på et programnummer mellem 0 og 31.

**STORE** → Rødt display  
**1** → Programnummer 1 vælges  
**STORE** → Grønt display  
**●** → Stand-by  
**1** → Den på programnummer 1 lagrede frekvens vises

### Tune

#### Søgning

Søgning under det valgte programnummer (0-31)

**<<** eller **>>** → Søgning stopper på nærmeste senderfrekvens

#### Finindstilling

Ønskede frekvens er fundet.  
Billedet står ikke skarpt.

**GO TO** → Grønt display  
**<<** eller **>>** → FT (fine tune) kan varieres op (+) eller ned (-)

## FINAL TEST

This test may be used as a check-up after the repair has been carried out.

NOTE! In sets with S/W version from 2.0 the potential preset numbers are 1-32 instead of 0-31.

## Connections

Connect the TV set to the mains supply and an aerial signal.

## Direct Operation

Activate the mains switch → The stand-by indicator lights

Activate **STEP** → Starts on P1 if the TV set has been disconnected from the mains supply or else on the programme last seen

## Beolink 1000 Remote Control

### Switching On

**TV** → Starts on the programme last seen  
0-31 → Starts on the preset No selected

### Tuning

Direct frequency selection  
Setting of a desired frequency, e.g. 543MHz (channel 30), on a preset No between 0 and 31.  
Conversion table for frequency/channel, see owner's manual (List of frequencies).

**GO TO** → Green display  
**5 4 3** → Yellow display

### Store

The set frequency can be stored on a preset No between 0 and 31.

**STORE** → Red display  
**1** → Selection of preset No 1  
**SOUND** → Green display  
**●** → Stand-by  
**1** → The frequency stored on the selected preset No is shown

### Tuning

#### Search

Search on the selected preset No (0-31)

**<<** or **>>** → The search stops at the closest transmitter frequency

#### Fine Tuning

The frequency desired has been found.  
The picture is not sharp.

**GO TO** → Green display  
**<<** or **>>** → FT (fine tuning) may be varied up (+) or down (-)

**Teletekst**

Kun ved apparater med indbygget teletekst.

- ☐ **TEXT** → Skifter til tekst-mode  
 Vælg en side, f.eks. 100  
☐ **GO TO** ☐ **1** ☐ **0** ☐ → Tekstside 100 vises  
☐ **STORE** ☐ **2** ☐ **STORE** → Tekstside 100 lagres på hukommelsesside 2  
☐ → Stand-by  
☐ **TEXT** ☐ **2** → Hukommelsesside 2, tekstside 100 vises

**Billede**

- ☐ **PICTURE** → »BRILLIANCE xx«, grønt display  
☐ eller ☐ → Lys varieres mellem 0 og 31  
☐ **PICTURE** → »COLOUR xx«, grønt display  
☐ eller ☐ → Farvemætningen varieres mellem 0 og 60  
☐ **PICTURE** → »CONTRAST xx«, grønt display  
☐ eller ☐ → Kontrast varieres mellem 0 og 31

**Lyd**

- ☐ **SOUND** → »VOLUME xx«, grønt display  
☐ eller ☐ → Volume varieres mellem 0 og 40  
☐ **SOUND** → »BALANCE x«, grønt display  
☐ eller ☐ → Balance varieres mellem 8 og -8  
☐ **SOUND** → »TREBLE x«, grønt display  
☐ eller ☐ → Diskantniveauet varieres mellem 5 og -4  
☐ **SOUND** → »BASS x«, grønt display  
☐ eller ☐ → Basniveauet varieres mellem 5 og -4  
☐ **SOUND** → »VOLUME HP xx«, grønt display  
☐ eller ☐ → Volume i hovedtelefon varieres mellem 0 og 32

**To sprog (System A2)**

Ved modtagelse af to-sprogede udsendelser kan der vælges mellem sprog A og B.

- ☐ **TURN** → Skifter mellem sprog A og sprog B. Indikeres af to røde pile i øverste højre hjørne (◀ = A, ▶ = B).

**Teletext**

Only applies to TV sets with built-in teletext.

- ☐ **TEXT** → Switches into the text mode  
 Select a page, e.g. 100  
☐ **GOTO** ☐ **1** ☐ **0** ☐ → Shows text page 100  
☐ **STORE** ☐ **2** ☐ **STORE** → Text page 100 is stored on memory page 2  
☐ → Stand-by  
☐ **TEXT** ☐ **2** → Shows memory page 2, text page 100

**Picture**

- ☐ **PICTURE** → "BRILLIANCE xx", green display  
☐ or ☐ → Brilliance varies in the range from 0 to 31  
☐ **PICTURE** → "COLOUR xx", green display  
☐ or ☐ → Colour saturation varies in the range from 0 to 60  
☐ **PICTURE** → "CONTRAST xx", green display  
☐ or ☐ → Contrast varies in the range from 0 to 31

**Sound**

- ☐ **SOUND** → "VOLUME xx", green display  
☐ or ☐ → Volume level varies in the range from 0 to 40  
☐ **SOUND** → "BALANCE x", green display  
☐ or ☐ → Balance level varies in the range from 8 to -8  
☐ **SOUND** → "TREBLE x", green display  
☐ or ☐ → Treble level varies in the range from 5 to -4  
☐ **SOUND** → "BASS x", green display  
☐ or ☐ → Bass level varies in the range from 5 to -4  
☐ **SOUND** → "VOLUME HP xx", green display  
☐ or ☐ → Volume level in head phones varies in the range from 0 to 32

**Dual Languages (System A2)**

When receiving dual language programmes, language A or B may be selected.

- ☐ **TURN** → Switches between language A and language B. This is indicated by two red arrows in the upper righthand corner (◀ = A, ▶ = B)

## Stereo lyd

Ved modtagelse af stereo-lyd skifter TV'et automatisk til stereo. Stereo indikeres af to røde pile i øverste højre hjørne.

**TURN**

→ Mono-lyd, røde pile slukket

**TURN**

→ Stereo-lyd, to røde pile i øverste højre hjørne

Ved skift til anden stereo-udsendelse vil TV'et automatisk skifte til stereo.

## Shift funktioner

Tidskonstant

**SHIFT 2**

→ Tidskonstanten ændres til en perfekt synkronisering mellem TV'et og en video-båndoptager (»toggle«-funktion). Indikeres med »A/V« efter programnummeret på skærmen

System B/System L/System M

**SHIFT 3**

→ Systemskift (»toggle«-funktion)

## Billede

Der foretages kontrol af geometri, højspænding, fokus, følsomhed, hvid balance, farvespring, opløsning, slæb, skygger, interferens og gråskala.

## Stereo Sound

When receiving stereo sound, the TV set automatically switches to stereo. Stereo is indicated by two red arrows in the upper righthand corner.

**TURN**

→ Mono sound, no red arrows in the upper righthand corner

**TURN**

→ Stereo sound, two red arrows in the upper righthand corner

When switching to another stereo transmission, the TV-set automatically switches to stereo sound.

## Shift Functions

Time constant

**SHIFT 2**

→ The time constant is changed into a perfect synchronization between the TV set and a video recorder (toggle function). This is indicated by "A/V" after the preset No

System B/System L/System M

**SHIFT 3**

→ Change of system (toggle function)

## Picture

Check geometry, high voltage, focus, sensitivity, white balance, colour switching, resolution, ringing, ghosts, interference and grey scale.

**ISOLATIONSTEST**

Ethvert apparat skal isolationstestes, efter at det har været adskilt. Testen udføres, når apparatet er samlet igen og er klar til udlevering til kunden.

Der må ikke forekomme overslag under testen!

Isolationstesten udføres på følgende måde:

De to stikben på netstikket kortsluttes og tilsluttes den ene af terminalerne på isolationstesteren. Den anden terminal tilsluttes stelbenet i en af højttalerstikdåserne.

**INSULATION TEST**

Each set must be insulation tested after having been dismantled. Make the test when the set has been reassembled and is ready to be returned to the customer.

Flashovers must not occur during the testing procedure!

Make the insulation test as follows:

Short-circuit the two pins of the mains plug and connect them to one of the terminals of the insulation tester. Connect the other terminal to the chassis pin of one of the loudspeaker sockets.

**OBS!**

For at undgå beskadigelser af apparatet er det vigtigt, at begge terminaler på isolationstesteren har virkelig god kontakt.

Spændingsreguleringen på isolationstesteren drejes langsomt op, indtil en spænding på 1,5-2 kV er opnået. Her skal den holdes i ét sekund, hvorefter der langsomt drejes ned for spændingen igen.

**NOTE!**

To avoid damaging the set it is essential that both terminals of the insulation tester have good contact.

Slowly turn the voltage control of the insulation tester until a voltage of 1.5-2 kV is obtained. Maintain that voltage for one second, then slowly turn it down again.

Beovision MX 5000 er identisk med Beovision MX 4500 undtaget fra flg. punkter:

Beovision MX 5000 is identical with Beovision MX 4500 except the following points:

Beovision MX 5000 ist mit Beovision MX 4500 identisch ausgenommen von den folgenden Punkten:

Beovision MX 5000 est identique à Beovision MX 4500 à l'exception des sujets suivants:

## JUSTERINGSVEJLEDNING

### Netdel, 1PL15:

Et DC-voltmeter tilsluttes ben 10 på linieudgangstransformatoren 1LL53.

Potentiometeret 1PL15 justeres til 152 V.

*Alle øvrige justeringer, se afsnit 5.*

## ADJUSTMENTS

### Power-supply, 1PL15:

Connect a DC voltmeter to pin 10 of the EHT-transformer 1LL53.

Adjust the potentiometer 1PL15 to 152 V.

*All other adjustments, see section 5.*

---

## JUSTIERUNGEN

### Netzteil, 1PL15:

An Stift 10 des Zeilenausgangstransformators 1LL53 einen Gleichstromspannungsmesser anschließen.

Das Potentiometer 1PL15 auf 152 V einstellen.

*Alle übrigen Justierungen, siehe Abschnitt 5.*

## REGLAGES

### Bloc d'alimentation, 1PL15:

Raccorder un voltmètre cc à la borne 10 du transformateur de sortie de ligne 1LL53.

Régler le potentiomètre 1PL15 sur 152 V.

*Tous les autres réglages, voir section 5.*

---

## ADSKILLELSE

## DISASSEMBLY

### Demontering af kontrastskærmen

### Removal of contrast screen

Pyntelisterne over og under kontrastskærmen løsnes ved at trykke listen ind (A) og samtidig trække ud i pilen B's retning. Listerne kan nu frigøres hele vejen rundt.

Loosen the upper and lower plastic strips by firmly pressing the strips in one side (A) and simultaneously pulling at the end of the strips in the direction of the arrow B. The strips are now loose and can be removed.

I hvert af de fire hjørner sidder en skrue som skrues ud, hvorefter kontrastskærmen er fri.

Loosen the screw in each of the four corners. The contrast screen can now be removed.

### Bagpart

### Rear part

De fire skruer løsnes, og bagparten trækkes lige bagud.

Loosen the four screws and then remove the rear part by pulling straight outwards.

## Serviceposition

## Service position

Chassiset frigøres fra rammen i bunden ved at frigøre låsetappene C ved chassissets forreste kanter. Herefter kan chassiset trækkes bagud.

Chassiset sættes i serviceposition, ved at det trækkes fri og løftes op.

Ledningsbakken kan løsnes fra kabinettet, ved at trække denne i pilen D's retning.

To detach the chassis from the frame in the bottom of the set, release the two locks C at the front edges of the chassis. The chassis can now be pulled outwards.

Place the chassis in the service position by pulling it outwards and lifting it.

Detach the cable tray from the cabinet by pulling it in the direction of the arrow D.

Toppanel

Top panel

Panelet løsnes i den ene side, ved at låsen aktiveres med en skruetrækker.

Loosen the panel in one side by releasing the lock with a screwdriver.

Toppanelet kan nu fjernes.

The top panel can now be removed.

PCB 05 IR-modtager

PCB 05 IR-receiver

Låsen løsnes med en skruetrækker, og PCB'en tages ud, ved at den løftes i den forreste kant.

Release the lock with a screwdriver and remove the PCB by lifting it at its front.

NB! Ved demontering af IR-modtagerens hus skal IR-modtagerdioden loddess ud.

Note! If the housing of the IR-receiver is to be removed, the IR-receiver diode must be desoldered.

Højtalerpanel

Loudspeaker panel

Panelet frigøres i venstre side (set bagfra) ved at løsne låsene med en skruetrækker igennem hullerne i kabinettet (E). Herefter trækkes panelet fri langs kanten.

Loosen the panel in the left-hand side (seen from behind) by inserting a screwdriver into the holes in the cabinet (E) to release the locks. Loosen the panel at the front of the set.

Panelet frigøres i den anden side ved at løsne låsene forfra med en skruetrækker mellem panelet og kabinettet (F).

To detach the panel in the opposite side, release the locks by inserting a screwdriver between the panel and the cabinet (F).

## SLUTAFPRØVNING

Denne afprøvning kan benyttes som kontrol, efter at reparationen er afsluttet.

NB! I apparater fra S/W version 2.0 er de mulige programnumre 1-32 i stedet for 0-31.

## Tilslutninger

TV'et tilsluttes lysnettet og et antennesignal.

## Nærbetjening

Hovedafbryderen aktiveres → Stand-by indikator lyser

**STEP** aktiveres → Starter på P1, hvis TV'et har været frakoblet netspændingen, og ellers på sidst benyttede program

## Beolink 1000 fjernbetjening

### Tænd

**TV** → Starter på sidst benyttede program  
0-31 → Starter på valgte programnummer

### Tune

Direkte frekvensvalg  
Indstilling af ønsket frekvens, f.eks. 543MHz (kanal 30), på et programnummer ml. 0 og 31.  
Omregningstabel for frekvens/kanal findes i betjeningsvejledningen (Frekvensoversigt).

**GOTO** → Grønt display  
**5 4 3** → Gult display

### Store

Den indstillede frekvens kan lægges i hukommelsen på et programnummer mellem 0 og 31.

**STORE** → Rødt display  
**1** → Programnummer 1 vælges  
**STORE** → Grønt display  
**●** → Stand-by  
**1** → Den på programnummer 1 lagrede frekvens vises

### Tune

#### Søgning

Søgning under det valgte programnummer (0-31)

**<<** eller **>>** → Søgning stopper på nærmeste senderfrekvens

#### Finindstilling

Ønskede frekvens er fundet.  
Billedet står ikke skarpt.

**GOTO** → Grønt display  
**<<** eller **>>** → FT (fine tune) kan varieres op (+) eller ned (-)

## FINAL TEST

This test may be used as a check-up after the repair has been carried out.

NOTE! In sets with S/W version from 2.0 the potential preset numbers are 1-32 instead of 0-31.

## Connections

Connect the TV set to the mains supply and an aerial signal.

## Direct Operation

Activate the mains switch → The stand-by indicator lights

Activate **STEP** → Starts on P1 if the TV set has been disconnected from the mains supply or else on the programme last seen

## Beolink 1000 Remote Control

### Switching On

**TV** → Starts on the programme last seen  
0-31 → Starts on the preset No selected

### Tuning

Direct frequency selection  
Setting of a desired frequency, e.g. 543MHz (channel 30), on a preset No between 0 and 31.  
Conversion table for frequency/channel, see owner's manual (List of frequencies).

**GOTO** → Green display  
**5 4 3** → Yellow display

### Store

The set frequency can be stored on a preset No between 0 and 31.

**STORE** → Red display  
**1** → Selection of preset No 1  
**SOUND** → Green display  
**●** → Stand-by  
**1** → The frequency stored on the selected preset No is shown

### Tuning

#### Search

Search on the selected preset No (0-31)

**<<** or **>>** → The search stops at the closest transmitter frequency

#### Fine Tuning

The frequency desired has been found.  
The picture is not sharp.

**GOTO** → Green display  
**<<** or **>>** → FT (fine tuning) may be varied up (+) or down (-)

**Teletext**

Kun ved apparater med indbygget teletext.

- TEXT** → Skifter til tekst-mode  
 Vælg en side, f.eks. 100  
**GOTO 1 0 0** → Tekstside 100 vises  
**STORE 2 STORE** → Tekstside 100 lagres på hukommelsesside 2  
 ● → Stand-by  
**TEXT 2** → Hukommelsesside 2, tekstside 100 vises

**Billede**

- PICTURE** → »BRILLIANCE xx«, grønt display  
 ☒ eller ☐ → Lys varieres mellem 0 og 31  
**PICTURE** → »COLOUR xx«, grønt display  
 ☒ eller ☐ → Farvemætningen varieres mellem 0 og 60  
**PICTURE** → »CONTRAST xx«, grønt display  
 ☒ eller ☐ → Kontrast varieres mellem 0 og 31

**Lyd**

- SOUND** → »VOLUME xx«, grønt display  
 ☒ eller ☐ → volume varieres mellem 0 og 40  
**SOUND** → »BALANCE x«, grønt display  
 ☒ eller ☐ → Balance varieres mellem 8 og -8  
**SOUND** → »TREBLE x«, grønt display  
 ☒ eller ☐ → Diskantniveauet varieres mellem 5 og -4  
**SOUND** → »BASS x«, grønt display  
 ☒ eller ☐ → Basniveauet varieres mellem 5 og -4  
**SOUND** → »VOLUME HP xx«, grønt display  
 ☒ eller ☐ → Volume i hovedtelefon varieres mellem 0 og 32

**To sprog (System A2)**

Ved modtagelse af to-sprogede udsendelser kan der vælges mellem sprog A og B.

- TURN** → Skifter mellem sprog A og sprog B. Indikeres af to røde pile i øverste højre hjørne (◀ = A, ▶ = B).

**Teletext**

Only applies to TV sets with built-in teletext.

- TEXT** → Switches into the text mode  
 Select a page, e.g. 100  
**GOTO 1 0 0** → Shows text page 100  
**STORE 2 STORE** → Text page 100 is stored on memory page 2  
 ● → Stand-by  
**TEXT 2** → Shows memory page 2, text page 100

**Picture**

- PICTURE** → "BRILLIANCE xx", green display  
 ☒ or ☐ → Brilliance varies in the range from 0 to 31  
**PICTURE** → "COLOUR xx", green display  
 ☒ or ☐ → Colour saturation varies in the range from 0 to 60  
**PICTURE** → "CONTRAST xx", green display  
 ☒ or ☐ → Contrast varies in the range from 0 to 31

**Sound**

- SOUND** → "VOLUME xx", green display  
 ☒ or ☐ → Volume level varies in the range from 0 to 40  
**SOUND** → "BALANCE x", green display  
 ☒ or ☐ → Balance level varies in the range from 8 to -8  
**SOUND** → "TREBLE x", green display  
 ☒ or ☐ → Treble level varies in the range from 5 to -4  
**SOUND** → "BASS x", green display  
 ☒ or ☐ → Bass level varies in the range from 5 to -4  
**SOUND** → "VOLUME HP xx", green display  
 ☒ or ☐ → Volume level in head phones varies in the range from 0 to 32

**Dual Languages (System A2)**

When receiving dual language programmes, language A or B may be selected.

- TURN** → Switches between language A and language B. This is indicated by two red arrows in the upper righthand corner (◀ = A, ▶ = B)

## Stereo lyd

Ved modtagelse af stereo-lyd skifter TV'et automatisk til stereo. Stereo indikeres af to røde pile i øverste højre hjørne.

- |             |   |
|-------------|---|
| <b>TURN</b> | → Mono-lyd, røde pile slukket                     |
| <b>TURN</b> | → Stereo-lyd, to røde pile i øverste højre hjørne |

Ved skift til anden stereo-udsendelse vil TV'et automatisk skifte til stereo.

## Shift funktioner

### Tidskonstant

- |                |  |
|----------------|--|
| <b>SHIFT 2</b> | → Tidskonstanten ændres til en perfekt synkronisering mellem TV'et og en video-båndoptager (»toggle«-funktion). Indikeres med »A/V« efter programnummeret på skærmen |
|----------------|--|

### System B/System L/System M

- |                |                                   |
|----------------|-----------------------------------|
| <b>SHIFT 3</b> | → Systemskift (»toggle«-funktion) |
|----------------|-----------------------------------|

## Billede

Der foretages kontrol af geometri, højspænding, fokus, følsomhed, hvid balance, farvespring, opløsning, slæb, skygger, interferens og gråskala.

## Stereo Sound

When receiving stereo sound, the TV set automatically switches to stereo. Stereo is indicated by two red arrows in the upper righthand corner.

- |             |  |
|-------------|--|
| <b>TURN</b> | → Mono sound, no red arrows in the upper righthand corner    |
| <b>TURN</b> | → Stereo sound, two red arrows in the upper righthand corner |

When switching to another stereo transmission, the TV-set automatically switches to stereo sound.

## Shift Functions

### Time constant

- |                |   |
|----------------|---|
| <b>SHIFT 2</b> | → The time constant is changed into a perfect synchronization between the TV set and a video recorder (toggle function). This is indicated by "A/V" after the preset No |
|----------------|---|

### System B/System L/System M

- |                |                                      |
|----------------|--------------------------------------|
| <b>SHIFT 3</b> | → Change of system (toggle function) |
|----------------|--------------------------------------|

## Picture

Check geometry, high voltage, focus, sensitivity, white balance, colour switching, resolution, ringing, ghosts, interference and grey scale.

**ISOLATIONSTEST**

Ethvert apparat skal isolationstestes, efter at det har været adskilt. Testen udføres, når apparatet er samlet igen og er klar til udlevering til kunden.

Der må ikke forekomme overslag under testen!

Isolationstesten udføres på følgende måde:

De to stikben på netstikket kortsluttes og tilsluttes den ene af terminalerne på isolationstesteren. Den anden terminal tilsluttes stelbenet i en af højttalerstikdåserne.

**INSULATION TEST**

Each set must be insulation tested after having been dismantled. Make the test when the set has been reassembled and is ready to be returned to the customer.

Flashovers must not occur during the testing procedure!

Make the insulation test as follows:

Short-circuit the two pins of the mains plug and connect them to one of the terminals of the insulation tester. Connect the other terminal to the chassis pin of one of the loudspeaker sockets.

**OBS!**

For at undgå beskadigelser af apparatet er det vigtigt, at begge terminaler på isolationstesteren har virkelig god kontakt.

Spændingsreguleringen på isolationstesteren drejes langsomt op, indtil en spænding på 1,5-2 kV er opnået. Her skal den holdes i ét sekund, hvorefter der langsomt drejes ned for spændingen igen.

**NOTE!**

To avoid damaging the set it is essential that both terminals of the insulation tester have good contact.

Slowly turn the voltage control of the insulation tester until a voltage of 1.5-2 kV is obtained. Maintain that voltage for one second, then slowly turn it down again.

# Bang & Olufsen

## Beovision MX 5000

Type 3211-3212-3213-3214-3216-  
3217-3218

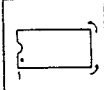

Beovision MX 5000 er identisk med Beovision MX 4500 undtaget fra flg. punkter:

Beovision MX 5000 ist mit Beovision MX 4500 identisch ausgenommen von den folgenden Punkter:

Beovision MX 5000 is identical with Beovision MX 4500 except the following points:

Beovision MX 5000 est identique à Beovision MX 4500 à l'exception des sujets suivants:

## JUSTERINGER

**Vigtigt! Der må ikke justeres i filteret BP 1.**

Ved alle justeringer skal apparatet tilføres et NICAM stereo antennesignal.

### Carrier VCO

Tilslut et oscilloskop til ben 20 på 22IC5, QPSK-Demodulator (TP1).

Med C 34 justeres, indtil øjemønster-signalet er støjfrit og stabilt.

### Clock-VCO

Drøj C 35 med uret, indtil stereolyden forsvinder, (stereo-indikatorerne i øverste højre hjørne af TV'et slukker). Drej derefter C 35 mod uret, indtil stereolyden forsvinder. Drej nu C 35 til midt imellem de to punkter.

### OSC

Indstil oscilloskopet til DC, og tilslut det mellem R50 og R55 (TP2).  
Juster C 133, indtil spændingen står stabilt på 1,5 V DC.

## ADJUSTMENTS

**Note! Do not adjust in the filter BP 1.**

During all adjustments, the TV-set must be fed a NICAM stereo antenna signal.

### Carrier VCO

Connect an oscilloscope to pin 20 of 22IC5, QPSK-Demodulator (TP1).

Adjust C 34, until the eye pattern signal is noiseless and stable.

### Clock VCO

Turn C 35 clockwise until the stereo sound disappears (the stereo indicators in the upper right-hand corner of the TV-set switches off). Now turn C 35 counter-clockwise until the stereo sound disappears. Finally turn C 35 until mid-position between the two positions.

### OSC

Set the oscilloscope to DC and connect it between R50 and R55 (TP2).  
Adjust C133 until the voltage is stable at 1.5 V DC.

## JUSTIERUNGEN

**Wichtig! Keine Justierungen am Filter BP 1 vornehmen.**

Bei sämtlichen Einstellvorgängen muß dem Gerät ein NICAM-Stereo-Antennensignal zugeführt werden.

### Spannungsgeregelter Träger-Oszillator

Einen Oszillographen an Anschluß 20 des 22IC5, QPSK-Demodulator (TP1) anschließen.

Mit C 34 solange justieren, bis das Augenmuster-Signal rauschlos und stabil ist.

### Spannungsgeregelter Clock-Oszillator

C 35 im Uhrzeigersinn drehen, bis der Stereo-Ton verschwindet (die Stereo-Anzeigelämpchen in der oberen, rechten Ecke des Fernsehgerätes erlöschen). Anschließend C 35 entgegen dem Uhrzeigersinn drehen, bis der Stereo-Ton verschwindet. Jetzt C 35 auf eine Position zwischen den beiden Punkten einstellen.

### OSC

Den Oszillographen auf Gleichstrom einstellen und zwischen R50 und R55 (TP2) anschließen. C 133 solange verstellen, bis die Spannung bei 1,5 V Gleichstrom stabil ist.

## REGLAGES

**Attention! Il est interdit de régler le filtre BP 1.**

Pour tous les réglages, appliquer à l'appareil un signal stéréo d'antenne NICAM.

### Carrier VCO

Raccorder un oscilloscope à la bobine 20 de 22IC5, QPSK-Demodulateur (TP1).

A l'aide de C 34, régler jusqu'à ce que le signal rappelant un oeil soit stable et exempt de parasite.

### Clock VCO

Tourner le condensateur C 35 dans le sens horaire jusqu'à évanouissement du son stéréo (les indicateurs stéréo dans le coin supérieur droit du téléviseur s'éteignent). Tourner ensuite C 35 dans le sens antihoraire jusqu'à évanouissement du son stéréo. Amener alors le condensateur C 35 à mi-chemin entre ces deux points.

### OSC

Régler l'oscilloscope sur cc et le raccorder entre R50 et R55 (TP2). Régler C 133 jusqu'à obtenir une tension stable de 1,5 V cc.

**VIGTIGT!**

**BUNDSKRUERNE MÅ IKKE TAGES AF, TAG  
PLASTLÅGET AF VED SERVICERING**

**Kontrol/justering af drejebord****Samling af drejebord**

- Træk ledning med DIN-stik gennem hullet i bunden.
- Saml 'motor control' PCB02 og microprocessor PCB01 med de tre plasttappe og skru dem fast i bunden af lejeenheden.
- Monter tandhjul A.  
Tandhjulet skal stå i midten af tandkransen (8 takker til hver side). Fastgør tandhjulet med en låseskive.
- Monter tandhjul B på potentiometeret.  
Drej markeringen på dette hjul, så det passer med markeringen på printet (1 mm hul).
- Læg tandhjul C ned så det går i indgreb med de to første tandhjul.
- Læg tandhjul D ned så det går i indgreb med tandhjul C.
- Monter motor og transistor.
- Sæt den trekantede metalplade på.  
Markeringen på potentiometeret må ikke have flyttet sig fra markeringen på printet, og tandhjulet A skal stadig stå midt på tandkransen.
- Monter tandhjul E så det går i indgreb med tandhjul D.
- Monter remmen.

**IMPORTANT!**

**DO NOT REMOVE BOTTOM SCREWS, REMOVE  
PLASTIC COVER WHEN SERVICING**

**Control/Adjustment of Motorized Stand****Assembly of Motorized Stand**

- Draw wire with DIN plug through hole in bottom.
- Assemble »motor control« PCB02 and microprocessor PCB01 with the three plastic studs and screw them to the base of the bearing unit.
- Assemble cogwheel A.  
Cogwheel A must be in the centre of the rim (8 cogs on each side). Fix the cogwheel with a lock washer.
- Assemble cogwheel B on the potentiometer.  
Turn the mark on cogwheel B until it fits the mark on the printed circuit board (1 mm hole).
- Lower cogwheel C so it meshes with the first two cogwheels.
- Lower cogwheel D so it meshes with cogwheel C.
- Assemble the motor and the transistor.
- Fit the triangular metal plate. The mark on the potentiometer must still fit the mark on the printed circuit board, and cogwheel A must still be in the centre of the rim.
- Fit cogwheel E so it meshes with cogwheel D.
- Fit the belt.

Drejebordet er nu klar til justering/kontrol

- Slut drejebordet til en modtager.
- Drej drejebordet ca. 20° til den ene side:  
[PICTURE] [>]
  - Gem positionen: [STORE] [PICTURE] [STORE]
  - Sluk modtageren: [●]

Drejebordet skal nu returnere, så markeringen på tandhjulet passer med markeringen på printet.

Hvis ikke markeringen passer, skal drejebordet justeres med trimmepotentiometeret, som kan nås fra den modsatte side.

- Tænd modtageren.
- Sluk når den gemte position er opnået.

Fortsæt indtil justeringen passer.

- Monter plastlåget.

The motorized stand is now ready for adjustment/control

- Connect the stand to a receiver.
- Turn the stand approx. 20° to one side:  
[PICTURE] [>]
  - Save the position: [STORE] [PICTURE] [STORE]
  - Turn off the receiver: [●]

The motorized stand should now return so the mark on the cogwheel fits the mark on the printed circuit board.

If the marks do not fit, then the motorized stand must be adjusted using the trim potentiometer, which can be reached from the opposite side.

- Turn on the receiver.
- Turn off when the saved position has been reached.

Continue until the adjustment fits.

- Fit the plastic cover.

## WICHTIG!

Überprüfung/Justierung des motorisierten Fußge-  
stells

Commande et réglage de la table orientable

### Zusammenbau des Fußgestells

### Assemblage de la table orientable

- Eine Leitung mit einem DIN-Stecker durch das Loch am Boden hindurchziehen.
- »motor control« PCB02 sowie den Mikroprozessor PCB01 mit den drei Kunststoffzapfen montieren und am Boden der Lagereinheit festschrauben.
- Zahnrad A montieren.  
Das Zahnrad muß sich in der Mitte des Zahnkranzes befinden (8 Zähne an jeder Seite). Das Zahnrad mit Hilfe einer Arretierscheibe befestigen.
- Zahnrad B an das Potentiometer montieren.  
Die Kennzeichnung an diesem Rad so drehen, daß sie mit der Kennzeichnung auf der Printplatte (1 mm Loch) übereinstimmt.
- Zahnrad C so anbringen, daß es mit den beiden ersten Zahnradern in Eingriff kommt.
- Zahnrad D so anbringen, daß es mit Zahnrad C in Eingriff kommt.
- Motor und Transistor montieren.
- Das dreieckige Blech aufsetzen.  
Die Kennzeichnung am Potentiometer darf sich nicht von der Kennzeichnung auf der Printplatte entfernt haben, und das Zahnrad A muß sich immer noch in der Mitte des Zahnkranzes befinden.
- Das Zahnrad E so montieren, daß es mit dem Zahnrad D in Eingriff kommt.
- Riemen montieren.

- Amener le câble muni de la prise DIN par l'orifice du fond.
- Assembler la carte PCB02 »motor control« et la carte PCB01 microprocesseur à l'aide des trois chevilles plastique et les visser dans le fond du dispositif à palier afin de les fixer.
- Monter la roue d'engrenage A.  
La roue d'engrenage doit être au milieu de la couronne dentée (avec huit dents de chaque côté). Fixer la roue d'engrenage à l'aide d'une rondelle-frein.
- Monter la roue d'engrenage B sur le potentiomètre.  
Faire tourner la marque de cette roue de manière à la faire coïncider avec la marque de la carte de circuit imprimé (orifice 1 mm).
- Positionner la roue d'engrenage C de manière qu'elle s'engrène avec les deux premières roues.
- Positionner la roue d'engrenage D de manière qu'elle s'engrène avec la roue d'engrenage C.
- Monter le moteur et le transistor.
- Poser la plaque de métal triangulaire.  
La marque du potentiomètre ne doit pas s'être déplacée par rapport à la marque de la carte de circuit imprimé, et la roue d'engrenage A doit toujours être au milieu de la couronne dentée.
- Monter le roue d'engrenage E de manière qu'elle s'engrène avec la roue d'engrenage D.
- Monter la courroie.

Das motorisierte Fußgestell kann nunmehr justiert/überprüft werden

- Das Fußgestell an einen Empfänger anschließen.
- Das Fußgestell um ca. 20° nach einer Seite drehen: 
- Die Position speichern:   
- Den Empfänger abschalten: 

Das motorisierte Fußgestell soll sich jetzt zurückbewegen, so daß die Kennzeichnung am Zahnrad mit der Kennzeichnung auf der Printplatte übereinstimmt.

Wenn die Kennzeichnung nicht am richtigen Platz ist, das Fußgestell mit Hilfe des Trimmerpotentiometers, das von der gegenüberliegenden Seite erreichbar ist, einstellen.

- Empfänger einschalten.
- Nach Erreichen der gespeicherten Position abschalten.

Weitermachen, bis die Einstellung stimmt.

- Kunststoffdeckel montieren.

La table orientable est à présent prête à être réglée/utilisée

- Connecter la table à un récepteur.
- Faire tourner la table de 20° environ d'un côté: 
- Mémoriser la position:   
- Eteindre le récepteur: 

La table orientable doit alors revenir dans la position où la marque de la roue d'engrenage coïncide avec la marque de la carte de circuit imprimé.

Si ces marques ne coïncident pas, il convient de régler la table orientable à l'aide du potentiomètre d'équilibrage, accessible par le côté opposé.

- Allumer le récepteur.
- L'éteindre une fois obtenue la position mémorisée.

Poursuivre jusqu'à ce que le réglage soit satisfaisant.

- Monter le couvercle plastique.

## JUSTERINGER

Vigtigt! Der må ikke justeres i filteret BP1.

Ved alle justeringer skal apparatet tilføres et NICAM stereo antennesignal.

### Carrier VCO

Tilslut et oscilloskop til ben 20 på 23IC5, QPSK-Demodulator.

Med 23C46 justeres, indtil øjemønster-signalet er støjfrit og stabilt.

### Clock VCO

Drej 23C47 med uret, indtil stereolyden forsvinder, (stereo-indikatorerne i øverste højre hjørne af TV'et slukker). Drej derefter 23C47 mod uret, indtil stereolyden forsvinder. Drej nu 23C47 til midt imellem de to punkter.

### OSC

Indstil oscilloskopet til DC, og tilslut det mellem 23R3 og 23R4. Juster 23C11, indtil spændingen står stabilt på 1,5 V DC.

## JUSTIERUNGEN

Wichtig! Keine Justierungen am Filter BP1 vornehmen.

Bei sämtlichen Einstellvorgängen muß dem Gerät ein NICAM-Stereo-Antennensignal zugeführt werden.

### Spannungsgeregelter Träger-Oszillator

Einen Oszillographen an Anschluß 20 des 23IC5, QPSK-Demodulator anschließen.

Mit 23C46 solange justieren, bis das Augenmuster-Signal rauschlos und stabil ist.

### Spannungsgeregelter Clock-Oszillator

23C47 im Uhrzeigersinn drehen, bis der Stereo-Ton verschwindet (die Stereo-Anzeigelämpchen in der oberen, rechten Ecke des Fernsehgerätes erlöschen). Anschließend 23C47 entgegen dem Uhrzeigersinn drehen, bis der Stereo-Ton verschwindet. Jetzt 23C47 auf eine Position zwischen den beiden Punkten einstellen.

### OSC

Den Oszillographen auf Gleichstrom einstellen und zwischen 23R3 und 23R4 anschließen. 23C11 solange verstellen, bis die Spannung bei 1,5 V Gleichstrom stabil ist.

## ADJUSTMENTS

Note! Do not adjust in the filter BP1.

During all adjustments, the TV-set must be fed a NICAM stereo antenna signal.

### Carrier VCO

Connect an oscilloscope to pin 20 of 23IC5, QPSK-Demodulator.

Adjust 23C46, until the eye pattern signal is noiseless and stable.

### Clock VCO

Turn 23C47 clockwise until the stereo sound disappears (the stereo indicators in the upper right-hand corner of the TV-set switches off). Now turn 23C47 counter-clockwise until the stereo sound disappears. Finally turn 23C47 until mid-position between the two positions.

### OSC

Set the oscilloscope to DC and connect it between 23R3 and 23R4. Adjust 23C11 until the voltage is stable at 1.5 V DC.

## REGLAGES

Attention! Il est interdit de régler le filtre BP1.

Pour tous les réglages, appliquer à l'appareil un signal stéréo d'antenne NICAM.

### Carrier VCO

Raccorder un oscilloscope à la bobine 20 de 23IC5, QPSK-Demodulateur.

A l'aide de 23C46, régler jusqu'à ce que le signal appelant un oeil soit stable et exempt de parasite.

### Clock VCO

Tourner le condensateur 23C47 dans le sens horaire jusqu'à évanouissement du son stéréo (les indicateurs stéréo dans le coin supérieur droit du téléviseur s'éteignent). Tourner ensuite 23C47 dans le sens antihoraire jusqu'à évanouissement du son stéréo. Amener alors le condensateur 23C47 à mi-chemin entre ces deux points.

### OSC

Régler l'oscilloscope sur cc et le raccorder entre 23R3 et 23R4. Régler 23C11 jusqu'à obtenir une tension stable de 1,5 V cc.
